

Introducing AquaRecycle's Ozone Plus Low Temperature Washing

As the cost of water and energy continues to rise, the need for water and energy conservation becomes greater. AquaRecycle's patented Laundry Wash Water Recycle System has answered the water conservation needs of our customer base for the last 10 years with great success. While the AquaRecycle® system recovers nearly 100% of the heat energy from the hot wastewater discharged from the washing machines, this accounts for only about 1/2 of the heat energy needed to wash linens in a commercial environment. Due to continued interest from our environmentally conscience customers wanting to wash in cold water, AquaRecycle® introduces Ozone Plus, designed specifically for Laundries recycling all their wastewater as well as using cold water washing. This allows our customers with a single point of contact for both water recycling and ozone washing and eliminates the problems of determining the best chemical approach for each technology.

AquaRecycle's Ozone Plus takes advantage of a patented Hybrid Ultraviolet Technology. The heart of the design is a high frequency ultraviolet light which readily converts the oxygen in air to ozone as the air passes by the light. The advantages over the traditional Corona Discharge ozone generators are numerous

including elimination of washing machine corrosion due to acid buildup, multiple injections points, simple operation and low operating costs. In addition, purchasing an Ozone Plus system in conjunction with a Wash Water Recycling system can cost significantly less than purchasing a separate ozone system from

injection of ozone into the washing machine water supply as well as direct injection into the washers themselves during the wash cycles. This dual injection points allows for higher sustained ozone concentration in the washing machine the entire time the linens are being washed.

another company. And, having only one vendor responsible for the proper operation as well as the servicing issues is beneficial as well.

VUV (very ultraviolet light generation) ozone generators do not create nitric acid which are formed by corona discharge ozone generators thereby reducing corrosion problems with washing machines, explains Randy Anderson, Chief Technology Officer for AquaRecycle®. This allows for both the

This advanced ozone generating technology coupled to our patented laundry water recycle system is your solution to the ever increasing water and energy costs required to wash linens. Ozone Plus can reduce your water, sewer and energy cost by 80% create the environmentally as well as financially responsible investment you can make for your laundry operation.

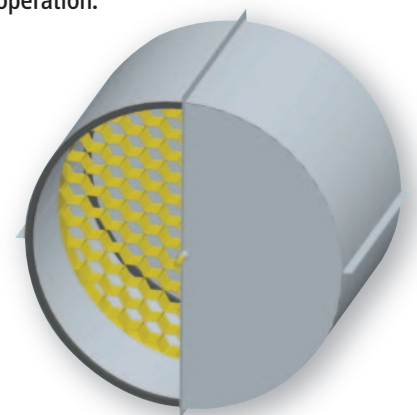

AquaRecycle® and ThermalRecycle™ Does It All!

Evans Hotels owns and operates several four star properties. The Lodge at Torrey Pines, The Catamaran Resort Hotel, The Bahia Resort Hotel, and The Bahia Sternwheelers Cruise Service. The laundry generated by these businesses is shipped to and processed at the Evans owned and operated Belmont Centralized Laundry in San Diego, CA.

For the purpose of Water and Energy Conservation, AquaRecycle® has partnered with Evans Hotels and San Diego Gas & Electric, (SDG&E), to install an AquaRecycle® Laundry Wash Water Recycling System and a ThermalRecycle™ Dryer Heat Recycle System at the Belmont Centralized Laundry. The laundry operation processes over 4 million pounds per year by utilizing an Ellis CBW tunnel washer and batch dryers, conventional washer extractors & stand

alone dryers to complement the washer extractors.

Since the January 2011 Start-up, the AquaRecycle System has recycled over 2 million gallons of laundry wastewater and the associated energy savings in the hot water heat energy recovery. In the same timeframe the four (4) TR6000-49 ThermalRecycle™ units operating with their dryers have recovered and recycled thousands of therms back to the dryers since start up. Several million gallons of drinking water will be conserved in the years to come as well as the natural gas savings of

continued on page 2

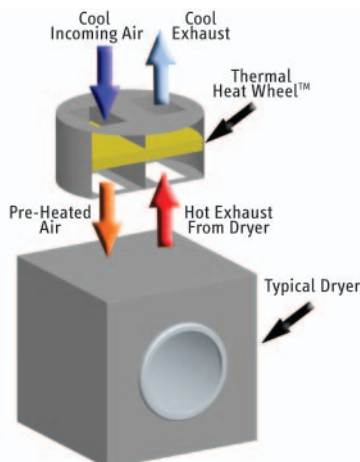

Aqua Does It All!

Continued from page 1

hundreds of thousands of metric tons of green house gasses will be prevented from being released to the atmosphere as well.

The best part of this project, according to David Cherashore, Executive Vice President of Evans Hotels and Executive Director of Belmont Laundry, is that the SDG&E Standard Performance Program has paid large rebates for the AquaRecycle® and ThermalRecycle™ energy savings in excess of 30% of the project cost. In addition, SDG&E's On Bill Financing (OBF) program has provided Evans Hotels with a 5 year zero percent loan to finance the remaining cost of the project. The monthly energy savings provided from the recycle systems are used to payoff the OBF monthly loan payments to SDG&E, leaving a "net positive cash flow" to Evans Hotels each month until the loan is paid in full.

AquaRecycle® / ThermalRecycle™, Evans Hotels and SDG&E are very proud to have teamed up together to provide this substantial water and energy savings project as well as sustainable practice to help promote economic and environmental advances in San Diego.

ThermalRecycle™ Continues to Gain Industry Support

ThermalRecycle™ Dryer Heat Recovery units have been tested at some of the industry's most prestigious laundry operations. Results have been great! ThermalRecycle™ has helped to reduce gas consumption up to 50%, as well as lower dryer times and improve operating performance. We are having tremendous success from the Caribbean to the West Coast.

ThermalRecycle™ Projects:

- The Ritz Carlton - St. Thomas, U.S. VI
- ALSCO Linen Services - Spokane, WA
- WHLS Cooperative Laundry - Milwaukee, WI
- Wayne Memorial Health System - Greensboro, NC
- JW Marriott - Atlanta, GA
- Belmont Laundry (Bahia Hotels) - San Diego, CA
- Gildan Textile - Rio Nance, Honduras
- Federal Bureau of Prisons - Pollack, LA and Aliceville, LA
- Multnomah County Inverness Prison - Portland, OR
- The Geo Group - Riverbend Correctional Facility
- George Bailey Detention Facility - San Diego, CA
- G&K Services - Santé Fe Springs, CA
- Cintas Services - Los Angeles, CA
- Hilton Americas - Houston, TX
- Unifirst - Wisconsin Rapids, WI
- Dry Cleaning Services - Mauritius
- Washington DOC - Clallam Bay Prison

ThermalRecycle™ clients have experienced significant energy cost reduction from 35% - 50%, shorter cycle times and the benefit of reducing the carbon footprint of their laundry operation. ThermalRecycle™ provides before and after consumption comparisons, with gas consumption tracking. Our ThermalRecycle™ system can provide proven results for your laundry operation.

With natural gas prices at historic lows, many of our projects still have two year paybacks and great return on investments. Many ThermalRecycle™ projects are eligible for state or local energy efficiency rebates and incentives. Want to lower your laundry operating cost? Contact your ThermalRecycle™ sales representative for a cost benefit analysis of your dryer operations.

AquaRecycle® Donates to Atlanta Mission

A recycle system, valued at \$75,000, will be donated and installed at Atlanta Mission's men's facility after the 2011 Clean Show, which has been serving homeless in downtown Atlanta, GA since 1938.

The facility launders bed linens and clothing for 500 men each day and expects the system to save \$40,000 in reclaimed water THIS YEAR. In addition, the system, which maintains some of the water's heat, will help Atlanta Mission reduce monthly utility bills.

Saving Millions Awards – AquaRecycle’s Quantifiable Results

AquaRecycle® is proud of our MILLIONS SAVED AWARD in recognition of the great work each of our customers has done to improve our environment by recycling their laundry wash water. The worldwide supply of safe drinking water is running out as populations increase and demand for water soars but our water supply remains constant. One in five people worldwide do not have access to safe drinking water. The millions of gallons you save mean others will have more water resources to survive.

Over the last 10 years of recycling, AquaRecycle® has recycled over 3 billion gallons of laundry wash water and project almost 1 billion additional gallons recycled in the next rolling 12 months. Our tremendous growth has brought the total systems installed to 150 systems and we expect to break 200 systems in the coming 12 months.

AquaRecycle® Shared Savings Program - Savings Without the Risk

Does your laundry have high water, sewer and energy costs? Is your location tight on capital dollars? AquaRecycle® may have the solution for reducing your laundry operating costs. For customers lacking capital funds but still interested in saving money and providing a great sustainability program, AquaRecycle® can offer our shared savings program where we split the water, sewer and energy savings 50%-50%. AquaRecycle's Shared Savings Program allows your laundry to enjoy the benefits of reduced water, sewer and energy costs, with no risk and no capital investment. AquaRecycle® will provide all the upfront capital to manufacture, ship, install and service the recycle system during the term of the shared savings agreement.

Shared Savings allows your facility to obtain significant savings without risk. Want to purchase the system at a later date to obtain all of the savings? AquaRecycle® will apply 25% of the rental portion of the shared savings towards the purchase

of your installed recycle system. We have partnered with multiple laundries that are currently enjoying the savings provided by the most innovative recycling program in the industry. Imagine saving SIGNIFICANT DOLLARS per year with AquaRecycle® as your environmental partner.

AquaRecycle's Shared Savings program has the following benefits:

- No upfront capital costs
- No long term contracts
- Ability to purchase recycle system at a later date
- Immediate savings toward your bottom line
- Monthly Savings Analysis Reports

There is no need to wait for capital spending to be approved to reduce your laundry's water, sewer and energy costs. AquaRecycle® the leader in laundry water recycling with over 150 installations and 3 billion gallons recycled has the savings option for you. The time to act is now!

Partnering With The Best for Significant Savings and Quick Payback

There is a famous line on Motel 6 commercials – "We will leave the light on for you." With Host Hotels and Resorts, the nations premier owner of high-end lodging resorts, the saying is more like "We will leave the Chandelier on for you".

Host Hotels and Resorts, a Fortune 500 company and the largest lodging REIT in the country with 133 properties around the world, is one of our largest customers with 20 recycle systems currently running and plans for several more units in 2011. These 20 systems have recycled over 400 million gallons of precious water over the last 8 years and at an average of 7 million gallons recycled monthly, we project them breaking HALF A BILLION GALLONS by the end of next year.

In March, AquaRecycle® celebrated its third annual participation in the Best in Class

Award conference in Host's hometown of Washington, DC. Being environmentally focused is very important to Host, who

These 20 systems have recycled over 400 million gallons of precious water over the last 8 years and at an average of 7 million gallons recycled monthly, we project them breaking HALF A BILLION GALLONS by the end of next year.

recognizes each year at the conference the most environmentally sustainable hotel in their portfolio. In addition, each month, they recognize hotels that have

achieved the greatest energy reduction or implemented the most innovative green practices. They have even devoted a section on their website to Environmental Practices and show AquaRecycle® and its accomplishments for the world to see.

Host Hotels properties now running AquaRecycle® systems includes 7 Marriott's, 5 Starwood's (Westin and W Hotels), 4 Ritz Carlton's, a Grand Hyatt, a Fairmont, a Delta and a Four Seasons. AquaRecycle® just completed the installation on our latest order from Host Hotels which encompassed 9 recycle systems installed over a 90 day period. This Capital Investment of \$1 million dollars for the 9 new systems has a calculated payback of 21 months and a 63% Return on Investment.
