

# AQUARECYCLE®

Clean water. Clean profit.™

From the leaders in laundry water recycling comes a Cold-Water Only recycling system that balances proper washing chemicals with 100% water recycling

## OZONE PLUS™

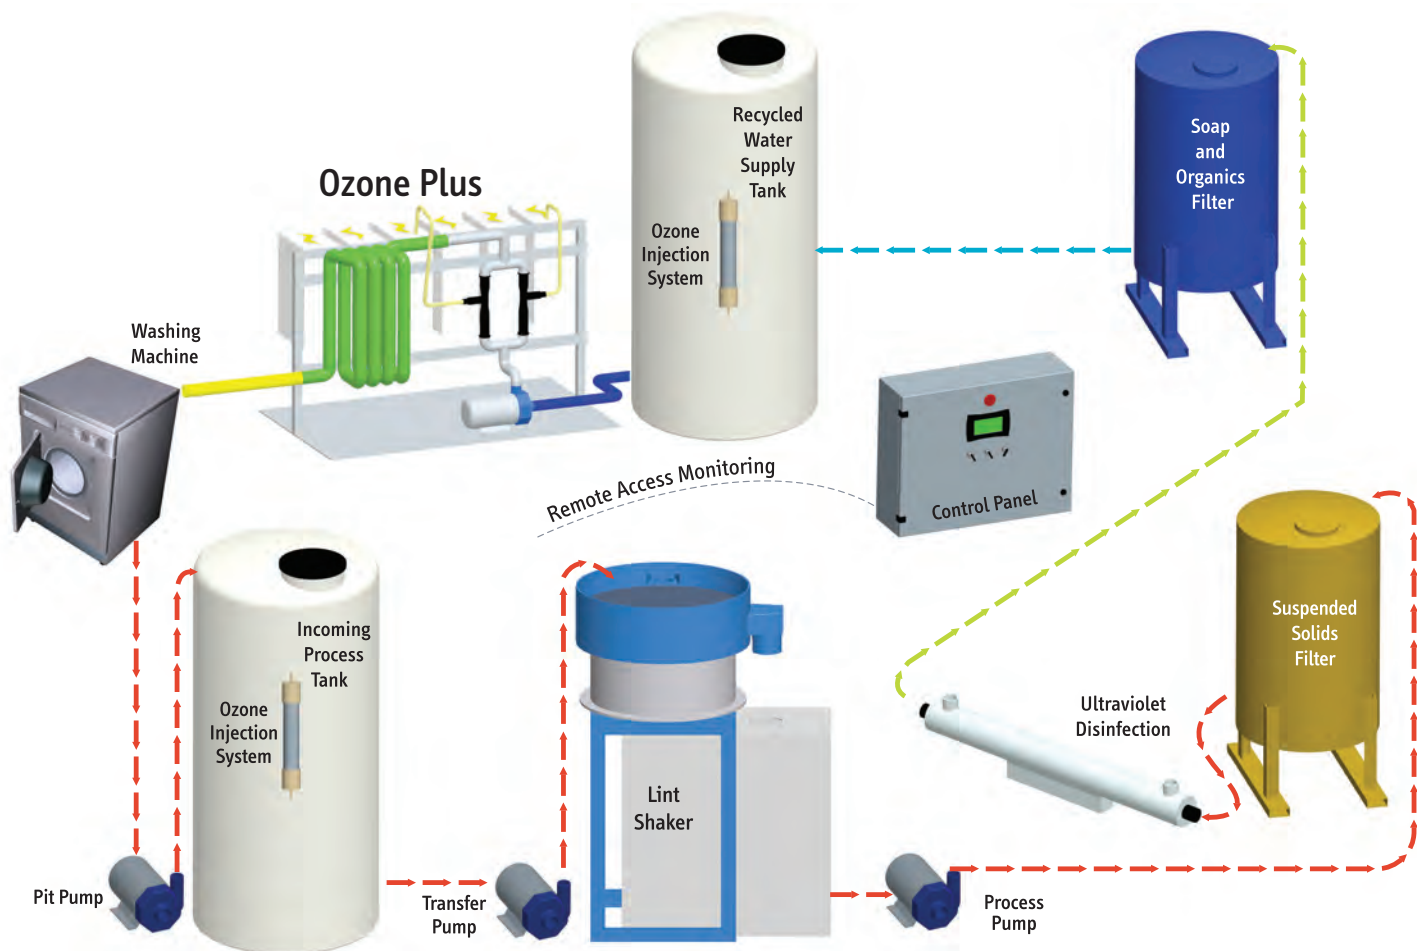

- Ozone Plus™ recycles ALL the laundry wastewater and reuses the recycled water for all washes and rinses just like our award winning standard recycling systems that produce 80% reductions in incoming water usage
- Ozone Plus™ means using cold water and ozone for laundry washing instead of hot water and combines it with a recycling process that uses Ultraviolet technology to insure proper disinfection in the washing process
- Our Ozone Plus™ technology is patented and the most effective, safest use of Ozonation on the market today. We use high concentrations of ozone generated by hybrid ultraviolet light rather than high voltage electrical Corona discharge versions commonly used.
- Ozone Plus™ injects directly into the wash wheel AND into the water for a double dose of ozone for the best results in the marketplace. And, the combination of 80% reduction in water use and 100% reduction in energy usage with no hot water needed is the most environmentally correct product for the laundry today
- Ozone Plus™ does not require special piping and there are no additional installation costs so the Ozone Plus™ option can save 50% off buying both systems separately. Sizes are SM (25 gpm) MED (50 gpm) LG (75 gpm) and XL (100 gpm)

# OZONE PLUS™

## Simple Operation

- As with our award winning PREMIUM recycle system, the wastewater from the washers is pumped into our Incoming Process Tank
- Wastewater is then pumped through our Lint Vibration (Shaker) System and then through our Suspended Solids Filter. We then run the filtered water through our Ultraviolet System for Pre-disinfection and then to the Oil and Grease Filter and Soaps and Organics Filter with the final recycled water flowing into our Recycled Water Supply Tank
- The final process is Ozone Plus™ where high concentrations of ozone are injected both into the recycled water and into the washing machine wheel for a “DOUBLE DOSE OF OZONE” continuously through all washing and rinsing cycles, whether water is being injected or during the agitation or draining/spin cycle
